Requirement Analysis

ORGANISATIONAL EXPERIENCE

May 2021 - Present

Globant India Pvt. Ltd, Magarpatta, Pune as Front-End Developer

Projects Undertaken:

Title: Control Tower

Duration: 10 months

Project Description: This web app provides ERC executives oversight across all local markets and enables them to monitor risks at an overall and country level. Whilst the end solution is being defined, the goal is to offer a focused list of insights that gives ERC executives the ability to report on performance and compliance externally and liaise with ERC officers to mitigate risk early by means of transition from one operational KPI's to dynamic insights.

Client: Novartis

Technology: Angular 14, TypeScript, HTML, CSS, Ag-grid, Highchart, Google Analytics, Qlik Sense.

Roles and Responsibilities:

- Gained knowledge of requirement specifications for the product
- Designed UI using Angular Material
- Produce clean, efficient code based on specification
- Test and maintained software products to ensure strong functionality and optimization
- Worked on the Ag-Grid and Highchart

Title: Helix 2.0

Duration: 1 year 1 month

Project Description: EY provides consulting assurance, tax and transaction services that help solve client's toughest challenges and build a better working world for all. EY Helix is cloud based analytics driven audit platform used to dynamically manage the complete life cycle of Azure resources like SQL DB, Data Warehouse, Azure Analytic Service etc, which are used for auditing and generating data analytics by using a wide range of analyzers. This platform can be used by auditors to analyse the sales invoicing activity throughout the year, impact of credit memos and how invoices are settled via viewing the analytics.

Client: EY

Technology: Angular 11, TypeScript, HTML, CSS, MOTIF, Ag-grid, .Net, Azure.,

Roles and Responsibilities:

- Gained knowledge of requirement specifications for the product
- Migrated Helix application from angular 8 to angular 11
- Migrated angular libraries angular 8 to angular 11
- Provided support of custom Rosetta library to analyzers
- Changed application UI design using MOTIF components

Dec 2016 - Apr 2021

Mindnerves Technology, Hadapesar, Pune as Front-End Developer

Projects Undertaken:

Title: Flowyoo

Duration: 1 year 6 months

Project Description: Flowyoo delivers its solution using the SaaS (Software as a Service) delivery model making it easy for Banks and other Financial Institutions to use it. The end-to-end Workflow Software automates Customer's day to day processes and enables them to connect with Real Estate Entities. The goal is to save you time, cost, effort and increase efficiency

Client: Flowyoo
